

# Washing instructions

Pin this next to the board. Washing is on the other sheet.  
Generic front loader, 1–8 kg · Generic steam iron

## ON THE BOARD

| #  | Pile                 | Thermostat  | Steam | Why not / how                                                                                  |
|----|----------------------|-------------|-------|------------------------------------------------------------------------------------------------|
| 1  | Dark                 | ••          | yes   | Inside out, medium heat                                                                        |
| 2  | Merino Wool          | ••          | yes   | Only if you must                                                                               |
| 3  | Cashmere Blend       | ••          | yes   | Low heat through a pressing cloth                                                              |
| 4  | White                | •••         | yes   | Iron while slightly damp, steam on                                                             |
| 5  | Coloured             | •••         | yes   | Steam, but turn prints and dark panels inside out first                                        |
| 6  | Denim                | •••         | yes   | Inside out on cotton heat if you want them crisp                                               |
| 7  | White Socks          | do not iron | —     |                                                                                                |
| 8  | White Towels         | do not iron | —     | Ironing crushes the pile flat and the towel stops drying you                                   |
| 9  | Coloured Socks       | do not iron | —     |                                                                                                |
| 10 | Coloured Towels      | do not iron | —     | Ironing crushes the pile flat and the towel stops drying you                                   |
| 11 | Microfibre Towels    | do not iron | —     | Polyester and polyamide start melting around 110 °C, well before the iron does anything useful |
| 12 | Black Socks          | do not iron | —     |                                                                                                |
| 13 | Raw Denim            | do not iron | —     | Pressing sets creases in the wrong places and flattens the fades that took months to earn      |
| 14 | Synthetic Activewear | do not iron | —     | Elastane starts degrading around 110 °C, and the technical finish goes with it                 |
| 15 | Gym Socks            | do not iron | —     |                                                                                                |
| 16 | Wool Trainers        | do not iron | —     |                                                                                                |

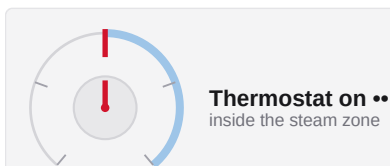

thermostat

The ring is the iron's thermostat as it sits on the dial, and the red pointer is where to turn it. The blue band is the zone where it makes steam; a setting below it is a dry iron. A crossed-out ring means leave the iron in the cupboard.

## 1. •• — wool, silk · 150 °C

3 piles

### HOW

#### Dark

Inside out, medium heat. Steam, don't press hard — shine on dark cotton doesn't come out.

#### Merino Wool

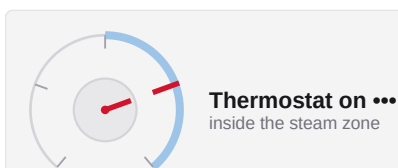

Only if you must: pressing cloth, no weight. Hanging it in a steamy bathroom drops the creases without touching it.

#### Cashmere Blend

Low heat through a pressing cloth. Better still, steam it on a hanger and let the creases drop out on their own.

## 2. ••• — cotton, linen · 200 °C

3 piles

### HOW

#### White

Iron while slightly damp, steam on. Cotton takes all the heat the iron has.

#### Coloured

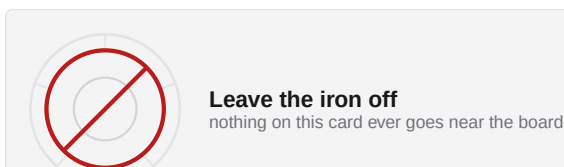

Steam, but turn prints and dark panels inside out first.

#### Denim

Inside out on cotton heat if you want them crisp. Steam.

## 3. Do not iron

10 piles

### NEVER THESE

#### White Socks

Ironing crushes the pile flat and the towel stops drying you.

#### White Towels

#### Coloured Socks

#### Coloured Towels

Ironing crushes the pile flat and the towel stops drying you.

#### Microfibre Towels

Polyester and polyamide start melting around 110 °C, well before the iron does anything useful.

#### Black Socks

#### Raw Denim

Pressing sets creases in the wrong places and flattens the fades that took months to earn.

#### Synthetic Activewear

Elastane starts degrading around 110 °C, and the technical finish goes with it.

#### Gym Socks

#### Wool Trainers
